### **Choice** refreshments

The Control-Flow is a fob-operated water boiler with an advanced programmable locking system, ensuring protection in environments where health and safety is of the utmost importance. With 4 different dispense functions, staff and patients alike can enjoy hot beverages without fear of scalding themselves in the process:

None/Open: No lock. Users can push and hold the button to pour boiling water.

Toggle: The fob turns the dispense function on and off sequentially, as and when required.

Timed: Water is dispensed for a pre-set time, before automatically locking.

One-shot: A single drink is dispensed before the boiling water function turns off.

### WHAT MAKES THE CONTROL-FLOW A GREAT ADDITION TO YOUR CLINIC?

One common grievance of mental health patients is the feeling of mistrust and discrimination when it comes to performing simple tasks such as making themselves a hot drink, or having access to water above 80°C. The Control-Flow aims to reduce the number of outbursts, machine damage and injury to support staff and patients that can occur because of this, by allowing them to safely, easily and efficiently pour themselves a tasty tea or coffee.

#### KEY FEATURES AND BENEFITS:

- A fob-operated water boiler minimising the risk of scalding, injury and upset.
- Boiling water is available on demand to make hot beverages.
- · Tank-baffle plates aid heat recovery and reduces the amount of steam emitted into the atmosphere.
- Dual safety protection: The boiler will cut out if it produces excess steam (over-boil) or has been boiled dry (boil dry).
- Eco Mode saves energy by operating at half the capacity's volume.
- · An easy-to-read LCD screen on the front of the machine, that tells users, "Very Hot Water!" when dispensing and warns them about simple and critical issues, such as 'CHECK WATER', 'OVERFILL' and 'CLEAN PROCESS'.

# Choice refreshments<sup>17</sup>

As safety is our chief concern, we're always on the look-out for superior machinery that will keep even our most volatile of patients protected. We are really impressed with the Control-Flow, allowing us to 'reward' patients with fobs as a sign of trust in their capabilities, therefore letting them enjoy a hot drink whenever they want one. Some of our staff have noted how much safer they feel as a result and appreciate how simple the machine is to use. Regarding Choice Refreshments themselves, they were only too happy to help with any queries we had, ensuring the smooth running of our machines. I can't recommend the Control-Flow and Choice Refreshments enough.

## Choice refreshments

Choice Refreshments was established in 1982 with the aim of supplying premium refreshment solutions to offices, care homes, hospitals and educational institutions across the UK. Continual company and product development in the realms of coffee machines, water boilers, water coolers and consumables has seen us go from strength to strength, providing our clients with the latest technology that places efficiency, ergonomics and environmental benefits at their core. Our emphasis on trust, value and great service has been the foundation of so many of our relationships with long-standing and loyal customers, and we consistently prove our worth. From helping you pick the right machine for your working environment to installation and maintenance, you won't find a more dedicated or supportive team out there.
